

Automation Pro Workflow - Local Install Guide

Welcome to your personal AI auto-posting system - now 100% FREE to run locally using Docker and n8n.

This guide will walk you through setting up everything on your own computer, and how to use ChatGPT as your installer assistant if needed.

Step-by-Step Installation:

1. Download and install Docker: <https://www.docker.com/get-started>
2. Open Terminal (Mac) or Command Prompt (Windows)
3. Run the following command to launch n8n locally:

```
docker run -it --rm -p 5678:5678 -v ~/.n8n:/home/node/.n8n n8nio/n8n
```

4. Once running, open your browser and go to: <http://localhost:5678>
5. Click 'Import' and select the workflow file from this package (Automation Pro Workflow.json)
6. Set up Google Drive connection by creating new credentials using your Google account
7. Add your UploadPost API key or sid_tt TikTok session to the HTTP Request node
8. Click 'Execute' on the Download and Upload nodes to test it
9. Optional: Add a cron schedule to automate it (already included in the workflow)
10. Leave n8n running as long as you want the automation to stay active.

Need Help?

To have ChatGPT help you set this up, simply upload this PDF and say:

"Please help me install and run this AI autoposter system locally using Docker and n8n. I have all files from the Automation Pro repo."
